PREFACE

As part of our efforts to deliver our Sustainability Vision, we at JSW Energy Limited ('JSW') have established this Policy to demonstrate our commitment to preventing local environmental issues.

Background of the Issue

During the operation of power plants and processes, there is the potential environmental emissions like smoke, fumes, dust, etc. to be generated thus creating a 'local environmental issue'.

Such local issues, especially if it is not quickly resolved, can result in a strained relationship between the parties involved and can, in some instances, result in legal proceedings.

How it Relates to JSW

As one of India's leading power producers, many of our sites and processes have the potential to create local environmental issues due to their location and proximity to neighbours. Whilst we have always sought to minimise all forms of local environmental issues and have always worked within any relevant regulatory frameworks relating to such issues, we recognise that we have a moral and social duty to do everything we can to prevent the lives of local households and businesses being adversely affected by our activities.

In pursuance of our stated commitment to prevent local environmental issues which are referred as local environmental issue, we have adopted a number of aims towards which we will strive.

These aims are supported by a range of actions and improvements through which they are to be achieved.

We aim to gain a full and detailed understanding of each site's potential to create local environmental issue.

To do this we will:

- Undertake assessment of all potential sources of local environmental issues at each site, encompassing fumes, dust, smoke, light pollution, etc.;
- Identify new opportunities that exist to eliminate or minimise existing or potential local environmental issues, including:

- Undertaking changes with respect to work practices and equipment;
- Exploring and adopting innovative idea on existing technologies and reasonable solutions;
- Educating our employees about the causes and impacts of local stake holder management;
- Establish a simple but robust mechanism whereby local stakeholders can raise issues relating to local environment, sites can investigate and address the issues raised, and local stakeholders receive timely updates of actions taken;
- Monitor the effectiveness of solutions we have implemented, on an annual basis to see how we are progressing and reporting the same to assess areas of improvements.

In the meantime:

We aim to continue our current efforts to eliminate or minimise our potential for causing local environmental issues.

To do this we will continue to:

- Manage at each site the existing potential of local environmental issues which we are aware.

We will continue to be fully committed to our statutory and voluntary obligations relating to local environmental issues.

These include:

- All local and national statutory regulations relating to the prevention or minimisation of environmental pollution;
- Reporting of our performance on the issue of local environmental issues through GRI (Global Reporting Initiative) as appropriate.

The achievement of our aims, the delivery of the improvements to achieve these aims, and the fulfilling of our compliance obligations, will all be managed through the Sustainability Framework that JSW Energy is committed to implement and maintain across all our sites.
